C++   Java   Python   Html   CSS   Git

PROJECTS

Hearthstone All-Star Battle (C++ QT） (07/2021 - 08/2021)
- Based on the Hearthstone(card game) by Blizzard Entertainment's, implemented the basic gameplay and architecture.
- The character names and function designing of all 60 cards are in line with the character's personality in World of Worldcraft.
- The software is extensible and can add the cards that have been in Blizzard's official hearthstone easily.
- URL: Hearthstone All-Star Battle (sunnysun0813.github.io).

Sightline Capstone Project (Python QT)
(09/2020 - 03/2021)
- Worked with capstone group to implement an image synthesis application.
- Designed the algorithm for solving the interface issues when resize the windows.
- Researched and applied the OpenGL technology.

Resume Scanner (Web application) (09/2021 - Present)
- The application will be able to scan an uploaded resume in word or pdf format and show how the resume match your pre-written job description
- The matched results will including skill, work experience, highest degree and so on
- User might need to create a free account so that they can save their written job description
